Traveling to the Czech Republic

The CDC issued a [Level 4 Travel Health Notice for the Czech Republic due to COVID-19](#), indicating a very high level of COVID-19 in the country. We recommend you do not travel to the Czech Republic at this time. Your risk of contracting COVID-19 and developing severe symptoms may be lower if you are fully vaccinated with an [FDA authorized vaccine](#). Before planning any international travel, please review the CDC's specific recommendations for [fully vaccinated](#) and [unvaccinated travelers](#).

For Entry to the Czech Republic

Effective February 15, 2022, the Czech government considers the validity of COVID-19 vaccinations to be nine months from the date of the last dose. A booster shot will extend the validity indefinitely. Please see the [Czech Ministry of Health website](#) for more information on current COVID-19 protective measures. You will also find information on the [Ministry of Interior's Coronavirus Information page](#) and on the Ministry of Health's [Covid Portal](#).

All travelers to the Czech Republic must complete a Passenger Locator Form, linked on the [Ministry of Interior's page on requirements for entry](#). Information on recognition of vaccination certificates from other countries can be found [here](#).

Entry requirements vary based on which country you are arriving from, your purpose of travel to the Czech Republic, and your vaccination status. The U.S. Embassy cannot advise you on your personal situation.
